

# **marren** **fuel injection**

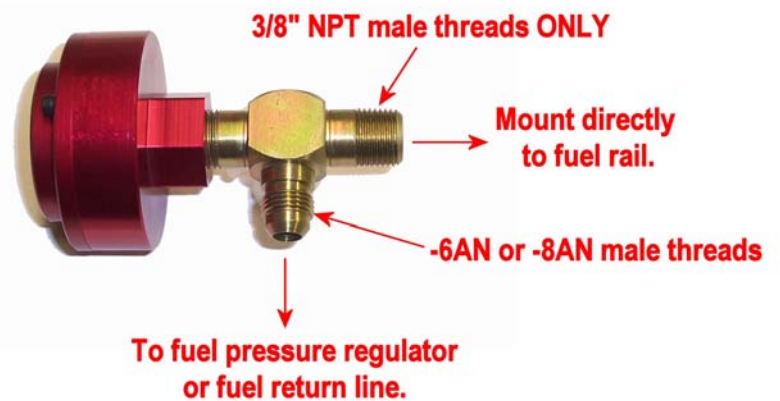

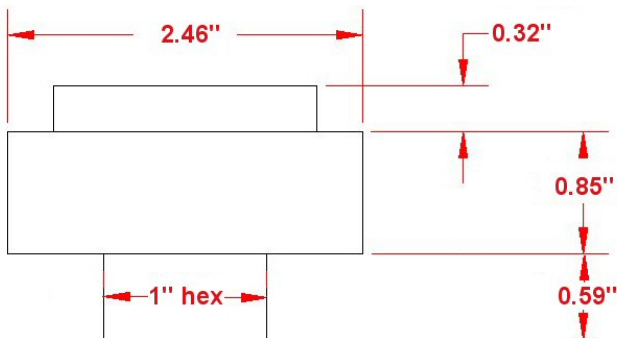

## **P/N 0201 fuel damper**

The Marren Fuel Injection pulsation damper is designed to absorb the hydraulic pulsations in the fuel rail caused by injector opening and closing events.

### **Compatibility**

This pulsation damper is designed to be compatible with all liquid motor fuels, including gasoline, diesel fuel, methanol, and ethanol. However, because of the corrosive nature of methanol/ethanol, the entire fuel system **MUST** be flushed after each use. Failure to do so will cause extensive fuel system damage.

### **Damper dimensions and recommended installation:**

NOTE: Tee fitting sold separately

Use Teflon thread sealant on ALL NPT threads. Failure to do so may cause a fuel leak. Do NOT use sealant on AN threads.

Mounting tees for the damper are available from Marren Fuel Injection in -6AN and -8AN outlet sizes.

For -6AN, use p/n **0266T**

For -8AN, use p/n **0268T**

Additional specialty fittings are available upon request. Please contact us with your needs.
